Total Visibility of your supply chain through RFID, Direct Part Marking (DPM) and the Error Proof® Total Solution Implementation

Identify with Direct Part Marking (DPM)

DPM to RFID

The Freedom Technologies Error Proof® Solution relates each scanned DPM to the RFID tag. By applying this technology you enable tracking throughout the manufacturing process and onto warehousing or shipment.

Track through RFID

Benefits of Visibility

RFID provides unit, carton and pallet-level visibility throughout the supply chain. By utilizing RFID, manufacturers and suppliers gain the ability for immediate identification of exceptions at check points. This visibility provides the opportunity to replenish the right product to the right place at the right time. Not only does RFID provide visibility on outbound items, RFID tracking also gives the overview of what's coming in the door so that you can block defective merchandise and counterfeit merchandise.
